Part 1. HTML & CSS

Style your HW1 entity list/form so it remains usable at 375px width.

```
.table-wrapper{
  width: 100%;
  overflow-x:auto;
}

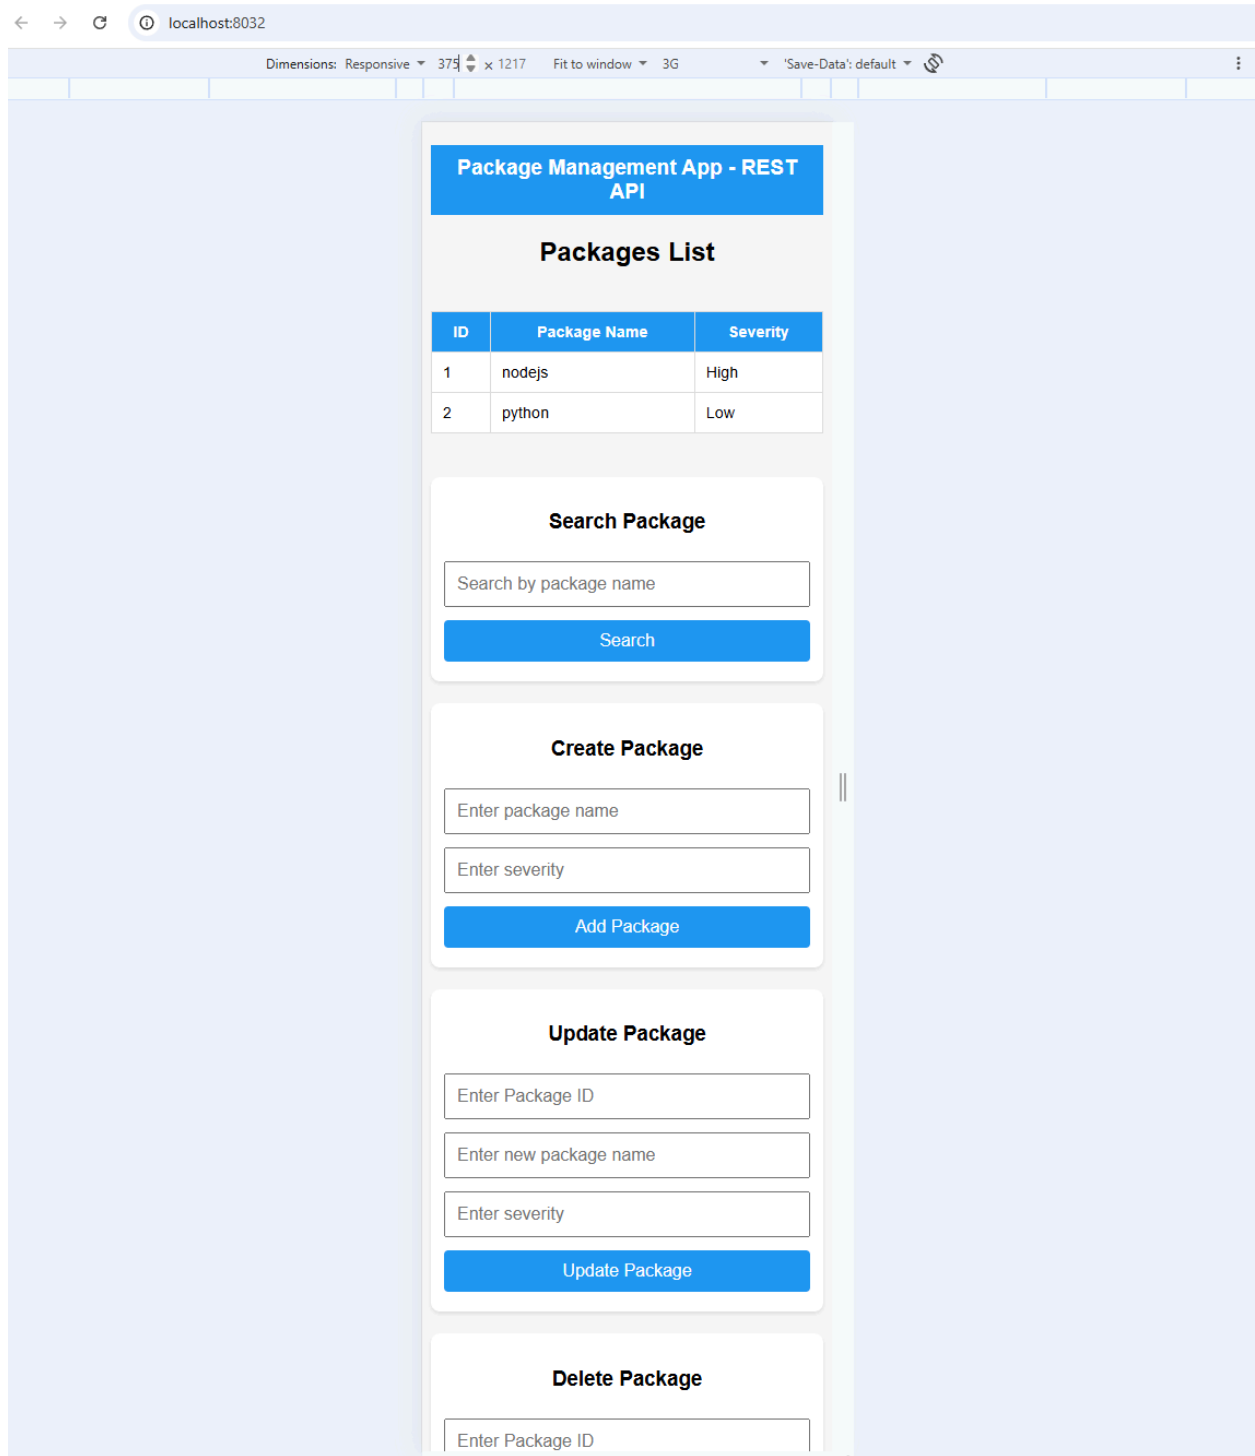

@media(max-width:375px){
  body{
    padding:8px;
  }

  .heading{
    font-size: 1.2em;
  }

  .actions-container{
    max-width: 100%;
    padding: 12px;
  }

  input, button{
    width: 100%;
    margin: 6px 0;
    box-sizing: border-box;
  }

  .package-table{
    width: 100%;
    font-size: 0.9em;
  }
}
```

Provide visible loading, empty, and error states
Loading

```
spinner{
  display:inline-block;
  width:16px;
  height:16px;
  border:3px solid white;
  border-top: 3px solid blue;
  border-radius: 50%;
  animation:spin 1s linear infinite;
  vertical-align:middle;
}

@keyframes spin{
  to {
    transform:rotate(360deg);
  }
}
```

```
.state-message {
  max-width: 500px;
  margin: 20px auto;
  padding:12px;
  border-radius: 4px;
  background-color: white;
  box-shadow: 0 2px 4px rgba(0, 0, 0, 0.1);
}
```

```

Part 3: Stateful Agent Graph

Step 1: Understanding the Core Concepts

Step 2: Setting up the State

```

9   class AgentState(TypedDict):
10       title:str
11       content:str
12       email:str
13       strict:bool
14       task:str
15       llm:Any
16       planner_proposal: Dict[str,Any]
17       reviewer_feedback: Dict[str, Any]
18       turn_count:int
19

```

Step 3: Creating the Agent Nodes

```

22  def planner_node(state:AgentState) -> Dict[str,Any]:
23      print("--NODE: Planner ---")
24      #planner logic
25      prompt = (
26          f"You are the planner agent. Generate 3 subject tags and a 25 max word summary of the blog content"
27          "Return a JSON object output\n"
28          "{ tags: three unique subject tags, summary: 25 max word summary of the blog}"
29          "Rules:"
30          "- do not copy and paste the blog content as use that as the summary"
31          "- summary must be rephrased in your own words"
32          "- output must be in JSON"
33      )
34      #call llm which is qwen3:8b from ollama
35      result = llm.invoke(prompt)
36      print("Response: ", result.content)
37      try:
38          #json output from the llm
39          proposal=json.loads(result.content)
40      except json.JSONDecodeError as e:
41          print("JSON parsing error: ", e)
42          proposal = {"tags": [], "summary":"","error":str(e)}
43      return {"planner_proposal": proposal}

```

```

45  def reviewer_node(state:AgentState) -> Dict[str,Any]:
46      print("--NODE: Reviewer ---")
47      #reviewer logic
48      prompt = (
49          f"You are the reviewer agent. Validate the tags and summary from the planner node"
50          "\nOriginal Content:\n"
51          f"Title: {state['title']}, Content: {state['content']}\n"
52          "\nPlanner proposal Content:\n"
53          f"JSON content: {json.dumps(state['planner_proposal'])}"
54          "Rules:"
55          "- make sure there are only three tags"
56          "- do not repeat the title, content, or proposal json content"
57          "- make sure summary is not a copy paste from the content and the summary is a max 25 words. if any of that is false, then rewrite the summary to be a max 25 words"
58          "- return only a valid JSON object only"
59      )
